

Taking the lead with facts and figures that pay off for municipalities, companies and the environment.

EEW Energy from Waste brief information.

Welcome to EEW Energy from Waste!

Energy is essential to everyday life. Since supplies of fossil fuels are limited, the use of energy from waste is becoming increasingly important. As Germany's leading company in the production of environmentally friendly energy from thermal waste recovery, it is our mission to take the lead: With ultra-modern energy from waste plants. With state-of-the-art technology that meets the latest environmental standards. With highly qualified, dedicated employees. With good and constructive relationships with citizens, municipalities and companies. And, of course, with environmentally friendly energy from waste.

.....

1 tonne of waste = 600 KWh of power

Power from waste is an important resource. The calorific value of the material is comparable to that of brown coal making it virtually predestined for energy use.

.....

The corporate structure of EEW Energy from Waste (simplified):

Around

1,250

Employees

Approx.

5,000,000

tonnes of energy recycling capacity

17

Plants in Germany and in
neighbouring countries

Approx.

3,800,000

megawatt hours of process steam and district heating generated in a resource-friendly manner

Around

2,500,000

megawatt hours of power produced in a climate-friendly manner

Reference:

power, district heating and steam volume produced by 18 EEW Energy from Waste plants in 2020

**Taking the lead
with environmentally friendly
energy from waste.**

**We tackle the future.
And assume responsibility.**

For around 30 years, the EEW Energy from Waste Group has been planning, building and operating thermal waste treatment plants that set standards across Europe. Our current network of 17 plants in Germany and neighbouring countries has a yearly energy recovery capacity of around 5.0 million tonnes of waste. We efficiently utilise the energy contained in the waste to generate process steam for industrial plants, district heating for residential areas and eco-friendly electricity. EEW's electricity output alone corresponds to the power required by around 720,000 households.*

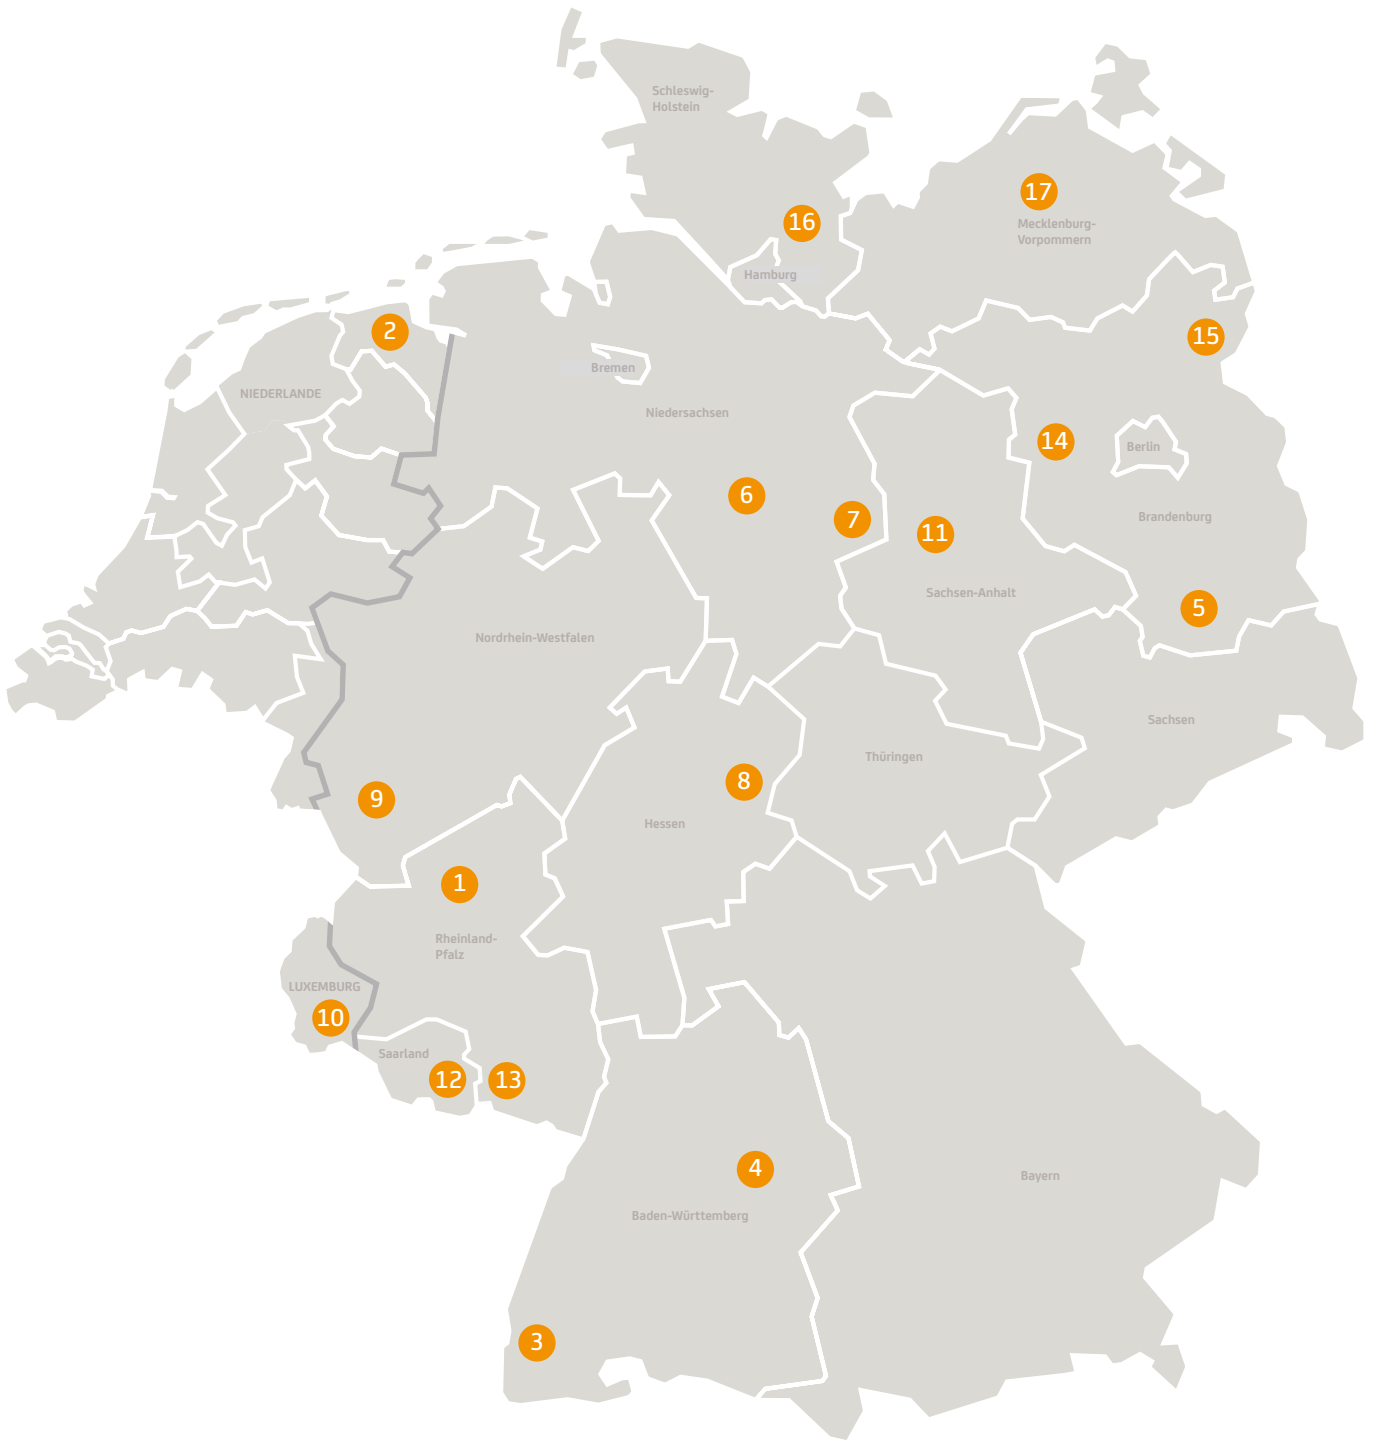

By using state-of-the-art technologies, we ensure a high degree of efficiency, availability and environmental protection. In addition to the expertise that we have acquired over the years, our size is also an advantage for our customers. In EEW's plant network, we have created a unique logistical infrastructure which offers maximum flexibility in acceptance capacity and therefore guarantees reliable waste management in both the short and long term.

For us, taking the lead means being excellent today and even better tomorrow. We want to be measured by our performance, our low emissions and our success.

* Assumed average annual household energy consumption: 3,500 kWh

**EEW plants symbolise high efficiency and low emissions.
In 17 plants in Germany and in neighbouring countries.**

**Taking the lead
for the air purity requirement.**

We shrink the carbon footprint. A benefit for the environment.

Generating energy from waste actively contributes to environmental protection. As waste contains 50 per cent biogenic substances on average, it is recognised that energy from waste plants produce energy from renewable sources pursuant to the Germany's Renewable Energy Sources Act (EEG). By utilising waste as a resource to generate energy, the use of primary energy sources such as coal, natural gas and oil can be avoided. At the same time, the energy recovery of the fuels used in EEW's plants leads to a smaller carbon footprint.

EEW's technologically sophisticated plants provide safe and environmentally friendly waste treatment. In the combustion process, the pollutants contained in the waste are either destroyed or removed from the materials cycle. Filtered-out raw materials and residues, such as bottom ash for road construction, are recovered and brought back into the materials loop. This value-adding process reduces the waste volume in total by approximately 90 per cent. Another area where we take the lead: Emissions from EEW plants are substantially below the strict statutory limits. In most cases, the air that leaves our plants is considerably less contaminated than city air.

We place a high value on transparency. Why not come and see for yourself?

You are cordially invited to visit the EEW site of your choice. Contact us to set up a tour of the plant with expert employees who will be pleased to explain to you the plant technology, environmentally friendly waste recovery and energy generation. We look forward to hearing from you!

Taking the lead with excellent services.

Measurable quality is also reflected in certifications. They underline the excellent collaboration and the outstanding performance of our plants and our company headquarters.

- Certified quality management system (ISO 9001)
- Certified occupational safety management system (ISO 45001)
- Certified environmental management system (ISO 14001)
- Certified energy management system (ISO 50001)
- Our plants are also certified waste management facilities pursuant to the Waste Management Facility Regulation (EfbV)
